Hydraulic Oil /Positive air pressure/ Negative air pressure /Coolant

Auto Coupler

Model JVA/JVB

Model JVC/JVD

Model JVE/JVF

Model JNA/JNB

Model JNC/JND
Model JLP/JLS
Model JTA/JTB

Coupler to Connect Fluid Circuit

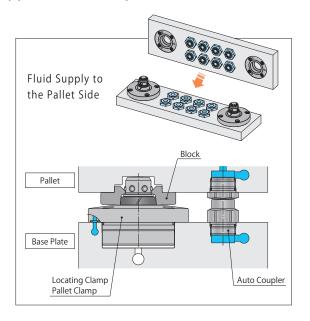

Compact and applicable to various fluids and flow rates.

What is Auto Coupler?

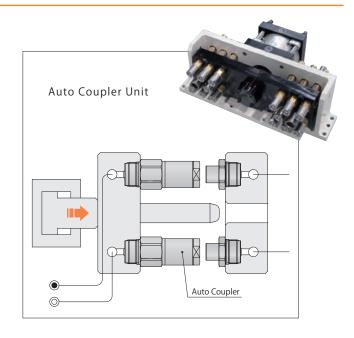

Auto coupler, designed to connect a variety of flow circuits, is suitable for automation and fits in small spaces. We can offer based on your requirement.

** The auto coupler does not have non-leak mechanism. In case you need the non-leak function, please refer to "Non-Leak Coupler" on KWCS Complete Catalog or visit our website (http://www.kosmek.com).

Application Examples

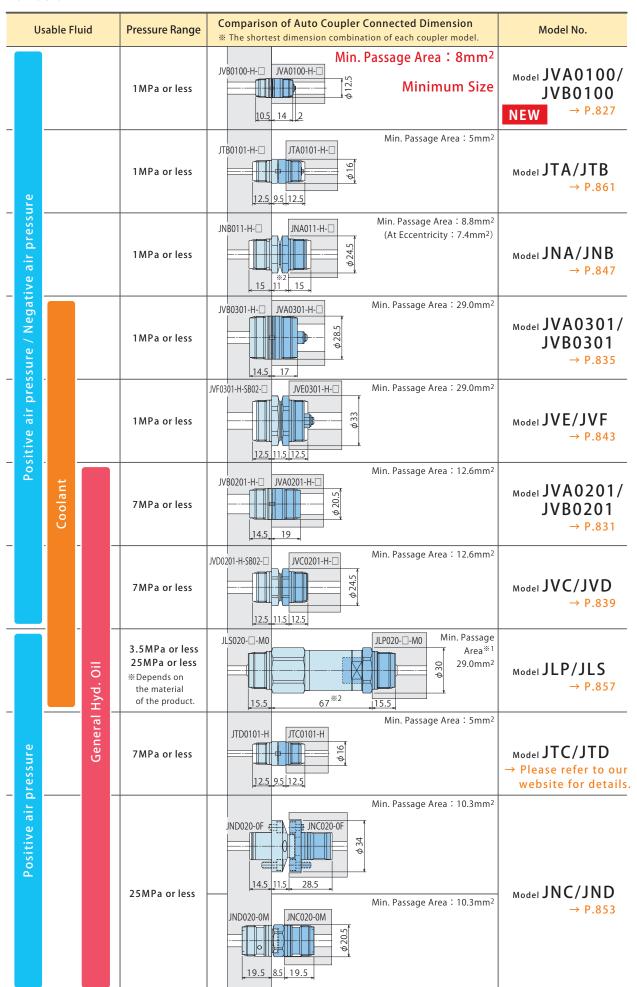

Connecting from the Pallet Bottom

Connecting from Outside

Variation

- *1. The minimum passage area of JLP/JLS differs depending on size.
- *2. It shows the connecting dimension on multiple connection.
- 1. Please refer to each page for detail.

Auto Coupler

Model JTC/JTD

Oil/ Positive air pressure/ Negative air pressure (Operating Pressure Range: lower than 7MPa)

JTC/JTD Feature

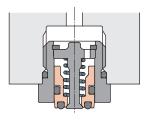

Ultra-Compact Auto Coupler.

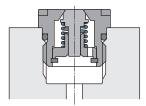

- * The auto coupler does not have the non-leak function. In case you need the non-leak function, please refer to "Non-Leak Coupler" on KWCS Complete Catalog or visit our website (http://www.kosmek.com).
- * No copper (Cu) or zinc (Zn) based materials are used. Stainless steel and aluminum materials may contain copper (Cu) and zinc (Zn) as additive elements.

Action Description

Disconnected State

JTC (Fixture Side)

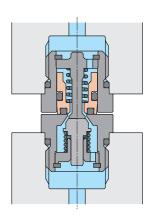

JTD (Pressure Source Side)

Connected State

The reaction force is generated by the built-in spring and the supply pressure.

Model No. Indication

1 Style

C: O-ring side of Connection Surface (Fixture Side)

D : Metal Side of Connection Surface (Pressure Source Side)

3 Material

H: Stainless Steel, Steel, Fluor Rubber

2 Design No.

1 : Revision Number

4 Grease

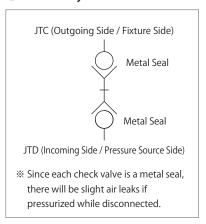

Blank : NBU8EP made by NOK KLUEBER (Standard)
CR : AFF made by THK (For clean environment)
FD : NH1 64-422 made by NOK KLUEBER

(For food machinery)

Specifications

Model No.		ure Side	JTC0101-H-□
Model No.	Pressure Source Side		JTD0101-H-□
Max. Operating Pressure MPa			7.0
Withstanding Pressure MPa			10.5
Min. Passage Area mm ²			5
Offset Distance (Tolerance) mm			±0.5
Angular Deviation (Tolerance) DEG.			0.3
Operating Temperature °C			0 ~ 120
Harlet Charlet			General Hydraulic Oil Equivalent to ISO-VG-32,
Usable Fluid			Positive air pressure, Negative air pressure
Reaction	at 7 MPa		0.537
	Operating Pressure	at 1 MPa	0.111
Force kN	Opera	at P MPa	$0.071 \times P + 0.04$
Weight g JTC JTD		JTC	15
		JTD	13

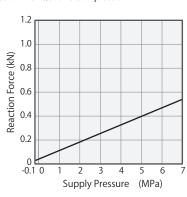

Circuit Symbol

Supply Pressure — Reaction Force Graph

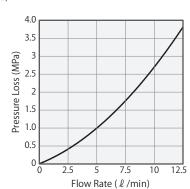

The graph shows the reaction force when supplying pressure after the connection of JTC/JTD is completed.

Supply Pressure	Reaction Force
(MPa)	(kN)
-0.1	0.03
0	0.04
1	0.11
2	0.18
3	0.25
4	0.32
5	0.40
6	0.47
7	0.54

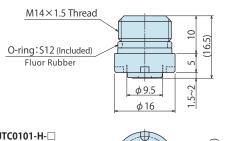

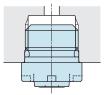

The fluid used on this data is general hydraulic oil equivalent to ISO-VG-32 (30 \sim 40 $^{\circ}$ C).

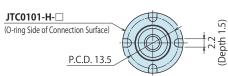

Flow Rate	Pressure Loss
(ℓ/min)	(MPa)
0	0
2.5	0.41
5	1.02
7.5	1.72
10	2.76
12.5	3.82

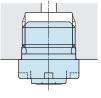

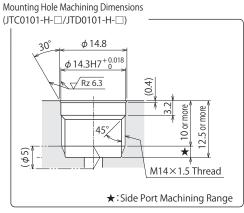

External Dimensions (JTC/JTD)

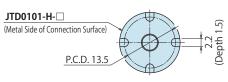

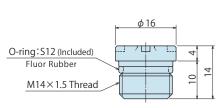

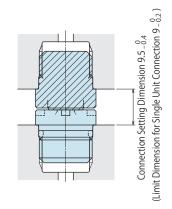

Model No.	Thread Size	Tightening Torque (N⋅m)
JTC0101-H-□ JTD0101-H-□	M14×1.5	10

Note:

1. Mounting Jig (Model ZZJ0040) or equivalent is required to install and remove JTC/JTD. Mounting Jig (Model ZZJ0040) is not included with JTC/JTD. Please order separately.

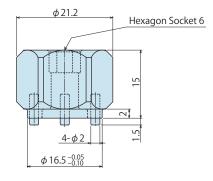

Accessary: Mounting Jig

This jig is used to mount and remove the JTC/JTD. Tightening Torque: 10N·m

Model No. Indication

ZZJ0040

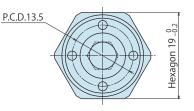

Design No. (Revision Number)

Note:

1. Mounting Jig (Model ZZJ0040) or equivalent is required to install and remove JTC/JTD.

Please determine the required number of jigs when ordering.

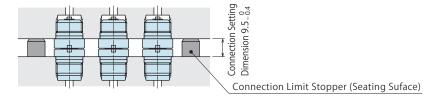

Cautions (JTC/JTD)

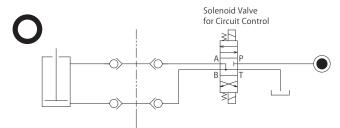

- 1. Do not connect or disconnect the auto coupler under pressure. (Refer to the following Circuit Reference.)
- 2. Release the air from the circuit before use.
- 3. Do not connect the coupler when contaminants are adhered on each connecting surface.

 When there are cutting chips or coolant, install a cover, or remove all contaminants with air blow.
- 4. If load is applied to the actuator on the fixture side while disconnected, it will be pressurized and fluid may leak from the coupler end.
- 5. Exceeding allowable offset leads to damage on internal parts. It is recommended to install a guide pin.
- 6. When using connection limit stopper(s) or multiple couplers (more than three of them), make sure it becomes the connection setting dimension when connected.

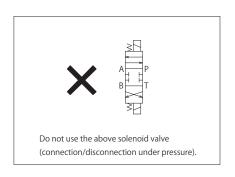

- 7. When pressing up to the connection limit, the force should be higher than the reaction force and lower than 1.0kN.
- 8. For mounting and removing the coupler, use the mounting jig (ZZJ0040) or equivalent.
- 9. When using with the pallet clamp (VS/WVS), it is recommended to use the auto coupler model JVC/JVD. (When using JTC/JTD with the pallet clamp: If a pallet might be lifted up by the spring reaction force when setting, the connection setting dimension needs to be reconsidered. Please contact us.)

Circuit Reference

Use a three position (center position, ABT connection) solenoid valve for circuit control, and stop supplying hydraulic (or air) pressure with the center position when connecting/disconnecting JTC/JTD.

Cautions

Notes on Handling

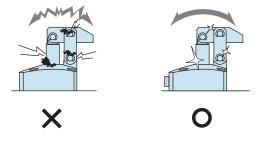

- 1) It should be operated by qualified personnel.
- The hydraulic machine and air compressor should be operated and maintained by qualified personnel.
- Do not operate or remove the product unless the safety protocols are ensured.
- ① The machine and equipment can only be inspected or prepared when it is confirmed that the safety devices are in place.
- ② Before the product is removed, make sure that the above-mentioned safety devices are in place. Shut off the pressure and power source, and make sure no pressure exists in the air and hydraulic circuits.
- ③ After stopping the product, do not remove until the temperature drops.
- 4 Make sure there is no trouble/issue in the bolts and respective parts before restarting the machine or equipment.
- Do not touch a clamp (cylinder) while it is working.
 Otherwise, your hands may be injured.

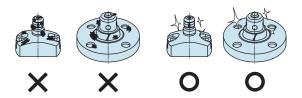

- 4) Do not disassemble or modify.
- If the equipment is taken apart or modified, the warranty will be voided even within the warranty period.

Maintenance and Inspection

- 1) Removal of the Machine and Shut-off of Pressure Source
- Before removing the product, make sure that the safety devices are in place. Shut off the pressure and power source and make sure no pressure exists in the air and hydraulic circuits.
- Make sure there is no trouble/issue in the bolts and respective parts before restarting.
- 2) Regularly clean the area around the piston rod and plunger.
- If it is used when the surface is contaminated with dirt, it may lead to packing seal damage, malfunctioning, fluid leakage.

- Regularly clean the reference surfaces (taper reference surface and seating surface) of locating products (SWT/SWQ/SWP/VRA/ VRC/VX/VXE/VXF/WVS/WVG/VWH/VWM/VWK).
- Locating products (except VRA/VRC/VX/VXE/VXF and SWR without air blow port) can remove contaminants with the cleaning function.
 When installing a workpiece or a pallet, make sure there are no contaminants such as thick sludge.
- Continuous use with dirt on components will lead to locating failure, fluid leakage and malfunction.

- 4) Regularly tighten pipe, mounting bolt, nut, snap ring, cylinder and others to ensure proper use.
- 5) Make sure the hydraulic fluid has not deteriorated.
- 6) Make sure there is a smooth action without an irregular noise.
- Especially when it is restarted after left unused for a long period, make sure it can be operated correctly.
- 7) The products should be stored in the cool and dark place without direct sunshine or moisture.
- 8) Please contact us for overhaul and repair.

Warranty

- 1) Warranty Period
- The product warranty period is 18 months from shipment from our factory or 12 months from initial use, whichever is earlier.
- 2) Warranty Scope
- If the product is damaged or malfunctions during the warranty period due to faulty design, materials or workmanship, we will replace or repair the defective part at our expense. Defects or failures caused by the following are not covered.
- ① If the stipulated maintenance and inspection are not carried out.
- ② Failure caused by the use of the non-confirming state at the user's discretion.
- ③ If it is used or operated in an inappropriate way by the operator. (Including damage caused by the misconduct of the third party.)
- ④ If the defect is caused by reasons other than our responsibility.
- ⑤ If repair or modifications are carried out by anyone other than Kosmek, or without our approval and confirmation, it will void warranty.
- ⑥ Other caused by natural disasters or calamities not attributable to our company.
- $\ensuremath{{\ensuremath{\bigcirc}}}$ Parts or replacement expenses due to parts consumption and deterioration. (Such as rubber, plastic, seal material and some electric components.)

Damages excluding from direct result of a product defect shall be excluded from the warranty.
